

8 mil Polypropylene Matte Finish

Water and tear-resistant banner for indoor use. Ideal for Restaurant and Bar signage. Universal coating for use in all thermal inkjet printers and water-based Piezo printers. Grommets easily installed for all hanging applications.

Opacity	97
Gloss (60 degrees)	21%
Whiteness	102
Caliper	8.2 mil
Tensile Strength (MD/CD)	50/65 lbs/in
Indoor Life	6 months with pigmented ink

Specifications

Ink coverage up to 250%
Excessive ink saturation can affect the waterfast properties and color uniformity.

For optimum results, set printer for highest print quality and media selection to "Heavy Coated Paper" paper mode.

Inks: Pigmented Recommended
Ink-fade may occur if using dye based inks. Pigmented inks will provide longer lasting images and higher degree of water-resistance.

Printers:

- EagleJet
- ColorSpan
- Encad NovaJet Pro Pro e,
- Kodak 4000 series
- Epson 9000
- Hewlett-Packard DesignJet Series

Printer & Ink Compatibility

TAPE & STITCHED HEM

Standard high-tack banner tape is recommended and preferred to sewing, as sewing may cause scratches in the surface coating. Follow the guidelines of the tape manufacturer.

If Stitching, a double-stitched hem with a maximum of five stitches per inch and corner reinforcements are recommended.

GROMMETING

Grommets should be placed in the hemline, so that the grommet is through two layers. To increase durability, a reinforced corner is recommended.
